

Set of 2 Safety Pull Straps for Rear Doors (Tesla Model Y & Model 3)

In the event of power loss or emergency, this accessory allows your rear passengers to instantly trigger the manual door release cable hidden inside the door pocket.

Step-by-Step Installation Instructions

Method 1: Models with Access Cover (Model Y & Compatible Model 3)

No Tools — 2 min

1. **Remove Rubber Mat:** Open the rear door and lift the small protective rubber mat at the bottom of the door pocket.
2. **Open Access Cover:** Remove the foam plug or plastic cover to reveal the original mechanical release cable loop.
3. **Attach Carabiner:** Clip the heavy-duty metal carabiner of the MACAPUCHE strap directly onto the cable loop.
4. **Reassemble:** Reinstall the rubber mat, leaving the strap protruding into the door pocket for immediate grab access.

Method 2: Models Without Direct Access Cover (Older Model 3)

Door Panel Removal Required

1. **Preparation:** Fully lower the window, pop out the puddle light at the bottom of the door, and remove the 2 Torx T25 screws.
2. **Remove Panel:** Carefully unclip the inner door panel by pulling firmly starting from the bottom.
3. **Route Cable:** Drill a small 1/4" hole inside the door pocket base and thread the emergency cable through.
4. **Connect & Reassemble:** Attach the MACAPUCHE carabiner to the cable, then reassemble the door panel firmly.

Safety Warning & Compatibility Check:

Before installation, check for the presence of the access hatch inside your rear door pocket. Always perform a manual test while stationary after installation to verify the strap opens the door smoothly.
